

Calculated parameter	Value	Source
Probability of vaccine uptake before reminder	84.06%	Adj uptake = (baseline uptake – trial uptake) / (1 - trial uptake)
Control arm uptake (odds)	0.33	Odds = probability/(1-probability)
Uptake with reminders (odds)	0.77	Baseline odds*odds ratio
Additional uptake with reminder (probability)	43.54%	Probability = odds/(1+odds)
Total vaccinated with reminder	91%	Total uptake = Adj uptake + (1 – adj uptake)*additional uptake
